Reactivation of hepatitis B virus infection in patients with hemo-lymphoproliferative diseases, and its prevention

Sagnelli C *et al.* HBV reactivation in hemo-lymphoproliferative diseases

Caterina Sagnelli, Mariantonietta Pisaturo, Federica Calò, Salvatore Martini, Evangelista Sagnelli, Nicola Coppola

Abstract

Reactivation of hepatitis B virus (HBV) replication is characterized by increased HBV-DNA serum values of about 1 log or by HBV DNA turning positive if previously undetectable in serum,

Hepatitis B Virus Reactivation After Cytotoxic ...

[https://www.cghjournal.org/article/S1542-3565\(06\)00496-4/fulltext](https://www.cghjournal.org/article/S1542-3565(06)00496-4/fulltext)

Reactivation of **hepatitis B virus (HBV)** is a well-recognized complication **in patients** with chronic HBV **infection** who receive cytotoxic or immunosuppressive therapy. In most cases, reactivations occur **in patients** who are carriers of **HBV infection** showing positive **hepatitis B** surface antigen (HBsAg).
