

PEER-REVIEW REPORT

Name of journal: *World Journal of Gastrointestinal Endoscopy*

Manuscript NO: 108030

Title: Post-endoscopic retrograde cholangiopancreatography cholecystitis: A review of incidence, risk factors, prevention, and management

Provenance and peer review: Invited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 08468193

Position: Peer Reviewer

Academic degree and professional title: Assistant Professor, PhD

Reviewer's Country/Territory: Japan

Author's Country/Territory: India

Manuscript submission date: 2025-04-02

Reviewer chosen by: Jia-Lin Zhang

Reviewer accepted review: 2025-04-09 11:54

Reviewer performed review: 2025-04-14 12:17

Review time: 5 Days

Content to be reviewed	Does the manuscript's content fall within the scope of the journal? Yes Is there any Key Word that is not included in the manuscript title? Yes Do authors' affiliations correspond to the content of the manuscript? Yes Does the Abstract contain the contents of each part of the manuscript (IMRaD)? Yes Are the Key Words complete? Yes

Is the content of the Introduction adequate? **Yes**

Is the content of the Materials and Methods complete?

Not Applicable

Is the description of the experiments clear and complete? **Not Applicable**

Are the experimental data presented in the manuscript's biostatistics content reliable? **Not Applicable**

Are the experimental data of the Results true and reliable? **Not Applicable**

Are the quality and resolution of the images up to standard? **Yes**

Do the selection and design of the figures and tables follow the principles of necessity and clarity? **Yes**

Is there any duplication between various parts of the manuscript and between the main text and the content presented in the figures and tables? **Yes**

Are the figures and tables numbered consecutively in the order in which they appear in the manuscript? **Yes**

Is the content of the Discussion reasonable? **Not Applicable**

Is the Conclusion reasonable? **Yes**

Are all references necessary and reasonable? **Yes**

Do authors omit important references? **Yes**

Are all references related to the topic of the manuscript? **Yes**

Do authors only cite their own earlier publications? **No**

Is the manuscript's text correct, concise, and clear? **Yes**

Will the manuscript's content be of interest to readers?
Yes

	Are additional experiments needed for the study? No Does the research scope comply with ethics? Not Applicable
Scientific quality	Grade B (Very good)
Novelty of this manuscript	Grade D (Fair)
Creativity or innovation of this manuscript	Grade C (Good)
Scientific significance of the conclusion in this manuscript	Grade B (Very Good)
Language quality	Grade C (Good)
Does this manuscript describe a study of the existing knowledge system?	Yes
Does this manuscript report a revolutionary innovation?	No
Does this manuscript report an unconventional innovation?	No
Conclusion	Minor revision
Re-review	Yes
Peer-reviewer statements	Peer-Review: Anonymous
	Conflicts-of-Interest: No

SPECIFIC COMMENTS TO AUTHORS

The manuscript is a systematic discussion of risk factors, prevention, and treatment of post-endoscopic retrograde cholangiopancreatography cholecystitis (PEC), summarizing previous reports. Since there are multiple methods of prevention and treatment depending on risk factors and circumstances, we believe this manuscript summarizing them is effective for future practice. However, I have several concerns and comments, as listed below. Minor #1 You mention cholecystitis as a contributing factor to intestinal

bacteria entering the bile duct during bile duct intubation and migrating from there to the gallbladder. I assumed that the statement intended that aspirating bile as much as possible before the contrast injection would not only prevent excessive contrast medium from entering the gallbladder but also prevent bacterial invasion. However, if there are any other specific measures, please describe them. # 2 In recent years, there have been reports that multihole-type covered SEMS is effective in the prevention of PEC. The possibility that new devices may be effective should also be discussed, as covered SEMS placement may be unavoidable depending on the obstruction and underlying disease. #3 I wonder if prolonged external drainage with PTGBD in PEC cases associated with ERCP for biliary tract cancer may result in the seeding of the puncture pathway. Please discuss the possibility. #4 The cholecystitis recurrence rate after drainage tube removal is a problem in PTGBD, but have there been any results with antegrade stenting through the puncture route? We believe that antegrade stenting can be successful even in cases of ETGBD failure, depending on the factors involved. #5 In Figure 2, cholecystectomy is described as a last resort when other treatments have failed, but cholecystectomy is highly effective and should have the lowest recurrence rate. If patient factors or the underlying disease make surgery intolerable, it is unavoidable, but in other cases, cholecystectomy is a treatment that should be given more consideration. This may be complicated, but please review Figure 2 in light of the above.

RE-REVIEW REPORT OF REVISED MANUSCRIPT
