SPECIFIC COMMENTS TO AUTHORS
Congratulations for such a good literature review regarding the complex mechanisms of dental pulp stem cells and their derivatives in regenerative medicine. All mechanisms cited and researched in the literature are definitely complex and require deep knowledge of the cellular-based processes that make this technique a viable solution for stem cell application. I appreciate the time and effort taken to fully describe all major mechanisms involved dental pulp stem cells applications, and the fact that you took the time to carefully review a vast volume of information contained in the cited literature (178 entries); also, another key important advantage of the paper is that the literature cited is up to date, with most of the titles not older than 4 years. A minor suggestion though: please make a small change in the title of the paper so it would better reflect that this is a literature review and not a research study. I personally consider that this paper fits the profile for publication in World Journal of Stem Cells.
PEER-REVIEW REPORT

Name of journal: World Journal of Stem Cells

Manuscript NO: 76207

Title: Therapeutic Potential of Dental Pulp Stem Cells and Their Derivatives: Insights from Basic Research toward Clinical Applications

Provenance and peer review: Invited Manuscript; Externally peer reviewed

SPECIFIC COMMENTS TO AUTHORS

Dear Authors, the paper is well written and can be considered for publication. However, before acceptance, some topics have to be added. In particular, you should discuss some about stem cells and dental applications, where some specific roles were well-defined, and you don't include in your review. So, please add to your references the following papers: 1) PubMed ID32811413 2) PubMed ID33386051 3) PubMed ID32188154

SPECIFIC COMMENTS TO AUTHORS

Dear authors,

The review is well rewritten and provides an overview of the potential application of dental pulp stem cells (DPSC) in the field of regenerative medicine. The authors explain the difference between the DPSC isolated from patients with different ages, but also how the donor’s health can affect positively or negatively their curative properties. DPSC can be administrated in patient by different methodologies, by single injection, by transplanting the cells with a support, as a cell sheet or by transplanting spheroids. Also, DPSC can be genetically modified for cell and gene therapies. In a last part, the authors explain how DPSC help an organ to heal by physical interaction, by releasing paracrine factors (cytokines, extracellular vesicles) or by blocking the inflammatory reaction. I have some comments:

- All latin words must be written in italic.
- Parts must be numbered, to facilitate the reading.
- Mechanisms of regeneration promoted by DPSC is long and should be separated in few parts: 1) effect, 2) paracrine effect, 3) Extracellular vesicles, 4) anti-inflammatory response (my titles are just example and should be modified by the authors).
- A graph showing DPSC origin to the medical application should be added, to summarize the DPSC regenerative medicine potential.

Reference should be written as a part before the references list.

- References needs PMID and DOI to be included.
