COMMENTS

COMMENTS TO AUTHORS:

The authors provided informative summary regarding the criteria of JAK2V617 mutation in myeloproliferative disorders including essential thrombocythemia, polycythemia vera, and primary myelofibrosis. The manuscript is well-focused on JAK2V617 mutation and these diseases, and provided tables are very informative. I think the manuscript is very useful for clinicians and scientists working on these diseases, and would also be a pretty good guide for scientists who are not familiar with this area. Major comments none Minor comments 1. It would be great if authors quickly fix Figures 3 & 6 to insert scale bars. All other figures with histology pictures have scale bars, but bars are missing in Figures 3 & 6. 2. Formatting of references. The authors should make sure that the formatting follows the guideline. 3. Spell check. I at least found one at the beginning (Abstract (page 2) line 5 "...classification of JAK2V617 muated..."). I would suggest authors to carefully check all spellings again.

COMMENTS

COMMENTS TO AUTHORS:

The manuscript is extremely well written and offers a deep overview and integration of the different diagnostic pathways available in the approach to myeloproliferative disorders.
