Manuscript Type: CASE REPORT

Long-term survival of a patient with advanced pancreatic cancer under adjunct treatment with *Viscum album* extracts: A case report

Werthmann PG *et al.* VAE in aPC

Paul G Werthmann, Robert Kempenich, Gerlinde Lang-Avérous, Gunver S Kienle

Abstract

BACKGROUND

Advanced pancreatic cancer (aPC) has a poor prognosis with limited survival benefit from current standard treatment. *Viscum album* extracts (VAE) are used by many cancer patients, showing immune-stimulating effects, improved quality of life, and a survival benefit in patients with aPC.

CASE SUMMARY

A 59-year-old architect developed epigastric pain. A cystic lesion of the pancreas of 45-mm diameter was detected. In a follow-up magnetic resonance imaging, about one year later, multiple lesions were seen in the corpus and the tail of the pancreas; CA-19-9 was elevated to 58.5 U/mL. A distal pancreatectomy with splenectomy was performed, and a tumor of 7 cm × 5 cm × 3.5 cm was excised. Histologic investigation
