COMMENTS TO AUTHORS

Nicely written review that presents an interest view on the current knowledge regarding treatment of acute pediatric pancreatitis. The authors conclude that early enteral nutrition, started within 24/48 hours, is beneficial in acute pediatric pancreatitis. However, prospective and better presentation of studies are crucially needed to get higher level of evidence.

COMMENTS TO AUTHORS

This manuscript has reviewed usefulness of early enteral nutrition for pediatric acute pediatric pancreatitis. This paper is interest, and well written and appropriate for the usefulness of early enteral nutrition. It will be acceptable for publication except one. Please show the data as to restoration of energy level in the early phase of acute pediatric pancreatitis.

COMMENTS TO AUTHORS

The systematic review analyses the therapeutic effect of enteral nutrition for acute pediatric pancreatitis, as compared to nil per os, which is an interesting topic. The article will be acceptable if the authors can make a few revisions concerning the following points. 1. Since it is a systematic review, the quality of the included retrospective studies and necessary, using the NOS system and the GRADE system for instance. 2. The authors used NPO as the control. But it might be more reasonable to compare enteral nutrition versus parenteral nutrition as the latter is commonly used in AP patients who are required to be NPO. 3. As NPO means nothing by mouth so the term "NPO diet" is quite confusing. 4. The studies included in the meta-analysis were just about pediatric patients with mild AP. However, the authors concluded that "early enteral nutrition is beneficial in acute pediatric pancreatitis" which may not be convincing since moderate to severe patients were not evaluated.
