COMMENTS TO AUTHORS

This manuscript describes a useful and safe method to treat breast cancer conservatively. The authors demonstrate that reduction mammoplasty technique is a useful and safe skill to treat breast cancer located in all breast quadrants with low morbidity playing a very important role in oncoplastic conservative surgery in moderate to large breasted patients. However, some minor points need to be polished. Q1: In the "Patients and methods" section, the authors did not set up a control group. So, please add a control group to explain why the method is better than others. Q2: Please revise the form of tables in the manuscript. Q3: The figure legends are not found in the text, please add them
