SPECIFIC COMMENTS TO AUTHORS

The topic chosen by Cheung et al is unique. They have succinctly presented the review. Some minor suggestions—Place , (comma) before and in following sentences—jaundice, tea-coloured urine(,) and hepatomegaly. Many such sentences where , needs to be placed. Universal screening has been adopted in some countries after consideration of risk and resource availability etc. - delete etc. Clinical features and extrahepatic manifestations may be presented in a Table and can delete the text. The majority... may be a changed to A majority of or Most of (written in viremia paragraph, TT HEV, and treatment paragraph) Delete the last sentence in conclusions paragraph-Strategies to reduce foodborne transmission should also be emphasized.

SPECIFIC COMMENTS TO AUTHORS

Dear Sir/Madam

With great interest I studied the article titled (Transfusion-transmitted hepatitis E: what we know so far? Manuscript NO: 66965). In this article, authors have tried to describe transmission of hepatitis E through transfusion of blood products (Fresh frozen plasma, platelet concentrates and packed RBCs) and organ transplantation. Risks of transmission, clinical features, diagnosis, management and long term prognosis has been described in detail. This topic covers a new interesting area in field of hepatology in the current era of organ transplantation and immunosuppression. The article is comprehensive and written well in a lucid manner. However, few changes in key words, discussion and corrections in grammar should be done which I have mentioned in the attachments.
