ESPS PEER-REVIEW REPORT

Name of journal: World Journal of Hematology

ESPS manuscript NO: 21732

Title: Role of MicroRNA in Regulation of Myeloma-Related Angiogenesis and Survival

Reviewer's code: 02097364

Reviewer's country: Japan

Science editor: Shui Qiu

Date sent for review: 2015-08-13 20:20

Date reviewed: 2015-08-25 10:34

COMMENTS TO AUTHORS

The authors described the importance of miRNA-mediated posttranscriptional regulation of the genes involved in angiogenesis and tumor cell-stroma cell interactions in the progression of multiple myeloma. This review article is very helpful for understanding the molecular pathogenesis of multiple myeloma.

COMMENTS TO AUTHORS

The comments: The manuscript by Michal A. Rahat and Meir Preis presents data on the role of microRNA in regulation of myeloma-related angiogenesis. The main idea of this manuscript is interesting and gives us new data for the future regarding the pathogenesis of multiple myeloma (MM). Although a number of studies on this subject have been published, still much remain to be clarified. This is an interesting and general well assembled paper. The present work appears timely, but there are some points that should be clarified: 1. The Chapter "IMPORTANCE OF ANGIOGENESIS IN THE PATHOGENESIS OF MM" should be reorganized. It may contain a subchapter on therapy. 2. The authors should add a key illustration (table or figure or both) in their revised manuscript. 3. Also, it should be corrected errors in spelling by a careful reading of the authors.
