

## SUPPLEMENTARY MATERIAL

Supplementary Figure 1 Patient flow diagram.

**Supplementary Table 1** Characteristics of patients.

|   | Idiopathic  | Crohn's Disease |
|---|-------------|-----------------|
| <i>n</i>                                    | 48          | 13              |
| Male  | 38 (79%)    | 8 (62%)         |
| Mean age (SD), years                        | 41.1 (11.6) | 36.1 (18.5)     |
| Ethnic origin:                              |             |                 |
| White                                       | 11 (23%)    | 5 (38%)         |
| Asian                                       | 26 (54%)    | 4 (31%)         |
| Black                                       | 3 (6%)      | 1 (8%)          |
| Other                                       | 7 (15%)     | 3 (23%)         |
| Unanswered                                  | 1 (2%)      | 0               |
| Median fistula duration (IQR), months       | 35 (14–60)  | 48 (17–66)      |
| Previously received antibiotics             | 39 (81%)    | 3 (23%)         |
| Median previous operations (IQR)            | 1 (0–4)     | 0 (0–4)         |
| Previously had surgery with curative intent | 9 (19%)     | 1 (8%)          |
| Current smoker                              | 22 (46%)    | 4 (31%)         |
| Imaging diagnostic for Crohn's disease      |             | 13              |
| Histological features of Crohn's disease    |             | 12              |
| Presence of granulomata                     |             | 6               |
| Crohn's disease diagnosed during study      |             | 2               |
| Highest order therapy received:             |             |                 |
| Steroids                                    |             | 1               |
| Mesalazine                                  |             | 1               |
| Azathioprine                                |             | 2               |
| Anti-TNF- $\alpha$                          |             | 6               |
| Receiving anti-TNF- $\alpha$ at recruitment |             | 5               |
| Previous abdominal fistulae                 |             | 6               |
| Previous abdominal surgery                  |             | 6               |

*Standard deviation (SD), interquartile range (IQR), tumour necrosis factor (TNF)*

**Supplementary Table 2** Characteristics of healthy controls.

|   | Demographics     | Indication                               | Endoscopic result                                       |
|---|------------------|--|---|
| 1 | Female, 59 years | Survey for extra-mammary Paget's disease | Ileocolonoscopy revealed left sided diverticulosis only |
| 2 | Female, 71 years | Loose stools and bloating                | Ileocolonoscopy revealed one small polyp only           |
| 3 | Female, 30 years | Constipation                             | Normal flexible sigmoidoscopy                           |
| 4 | Male, 65 years   | Anorectal bleeding                       | Normal flexible sigmoidoscopy                           |
| 5 | Female, 21 years | Constipation                             | Normal ileocolonoscopy                                  |
| 6 | Female, 75 years | Iron deficiency anaemia                  | Normal colonoscopy                                      |

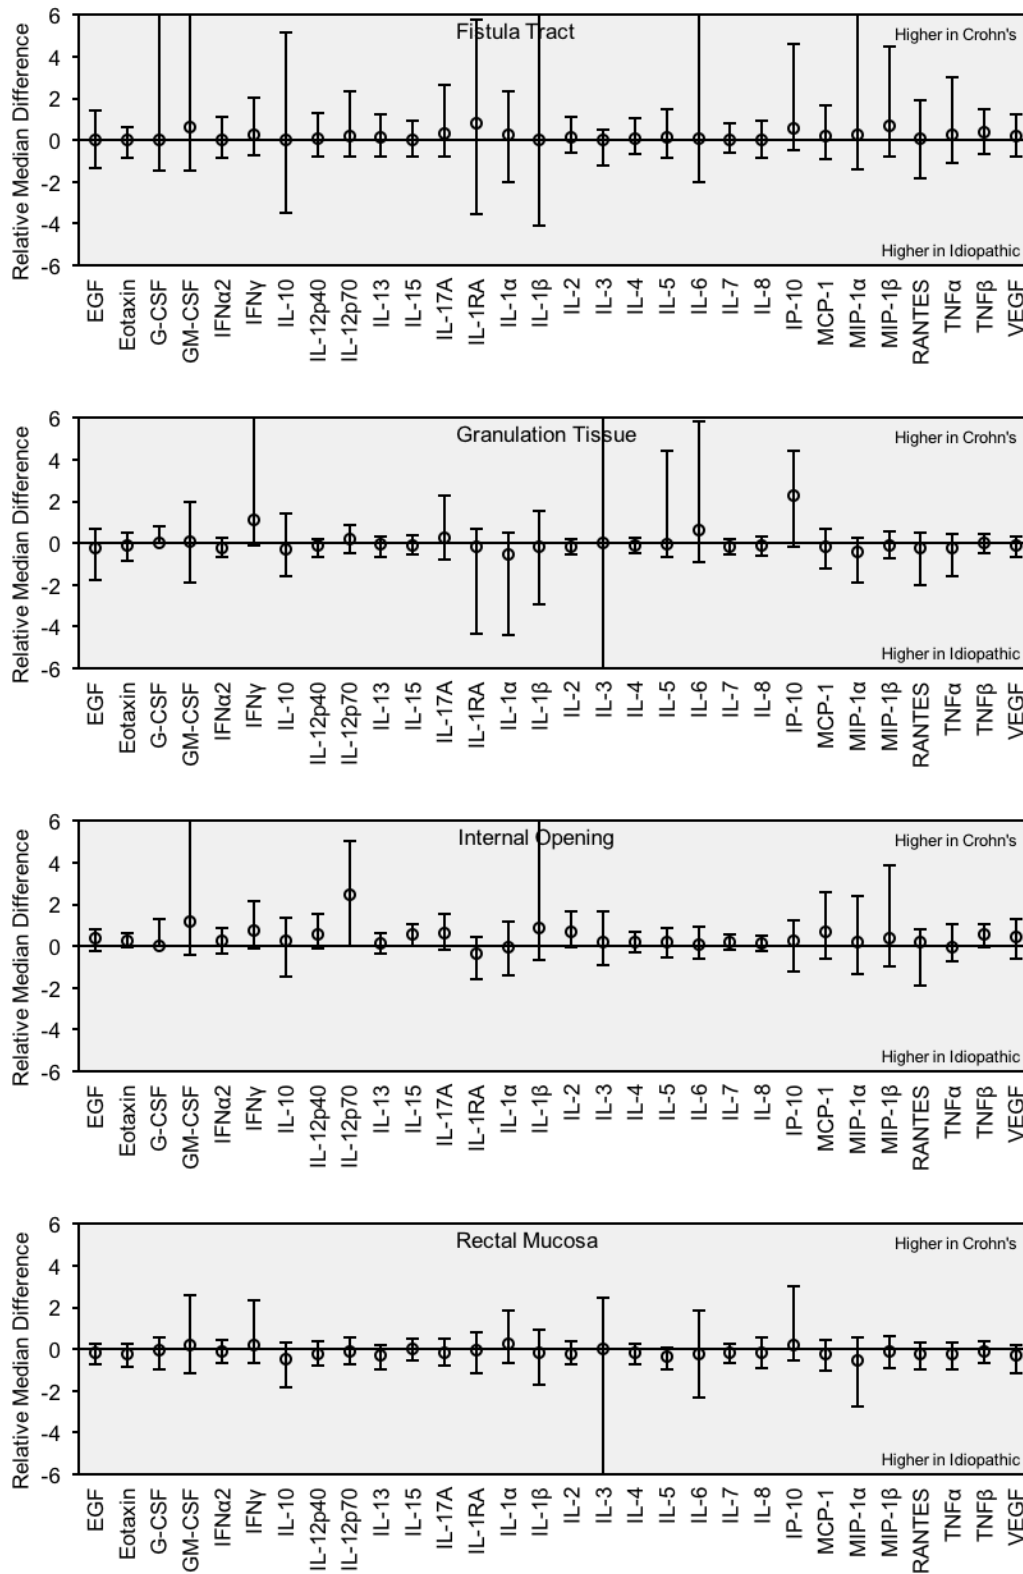

**Supplementary Table 3** List of 30 cytokines and chemokines measured by the 30-plex Milliplex MAP Human Cytokine/Chemokine Magnetic Bead Panel (EMD Millipore, Billerica, Massachusetts).

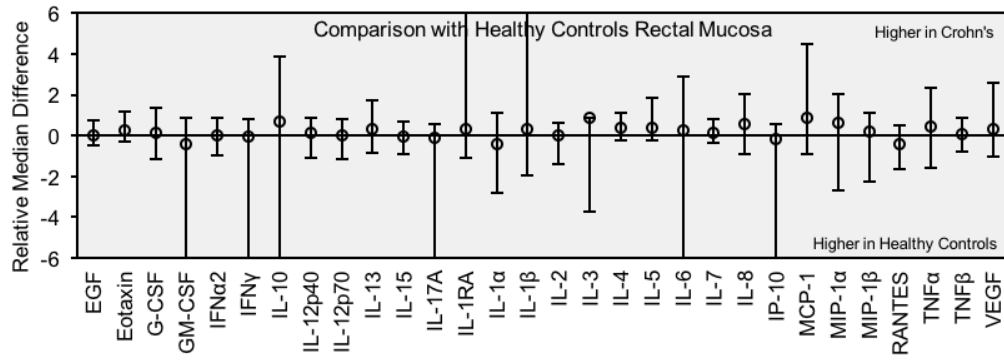

|    | Cytokine       | Name   |
|----|----------------|--|
| 1  | EGF            | Epidermal growth factor                                      |
| 2  | Eotaxin        | Human epidermal growth factor receptor 2                     |
| 3  | G-CSF          | Granulocyte-colony stimulating factor                        |
| 4  | GM-CSF         | Granulocyte-macrophage- colony stimulating factor            |
| 5  | IFN $\alpha$ 2 | Interferon alpha 2   |
| 6  | IFN $\gamma$   | Interferon gamma   |
| 7  | IL-10          | Interlukin-10  |
| 8  | IL-12p40       | Interlukin-12 p40 homodimer                                  |
| 9  | IL-12p70       | Interlukin-12 p70 heterodimer                                |
| 10 | IL-13          | Interlukin-10  |
| 11 | IL-15          | Interlukin-15  |
| 12 | IL-17          | Interlukin-17  |
| 13 | IL-1RA         | Interlukin-1 receptor agonist                                |
| 14 | IL-1 $\alpha$  | Interlukin-1 alpha   |
| 15 | IL-1 $\beta$   | Interlukin-1 beta  |
| 16 | IL-2           | Interlukin-2   |
| 17 | IL-3           | Interlukin-3   |
| 18 | IL-4           | Interlukin-4   |
| 19 | IL-5           | Interlukin-5   |
| 20 | IL-6           | Interlukin-6   |
| 21 | IL-7           | Interlukin-7   |
| 22 | IL-8           | Interlukin-8   |
| 23 | IP-10          | Interferon-gamma-inducible protein-10                        |
| 24 | MCP-1          | Monocyte chemoattractant protein-1                           |
| 25 | MIP-1 $\alpha$ | Macrophage inflammatory protein-1 alpha                      |
| 26 | MIP-1 $\beta$  | Macrophage inflammatory protein-1 beta                       |
| 27 | RANTES         | Regulated on activation normal T cell expressed and secreted |
| 28 | TNF $\alpha$   | Tumour necrosis factor alpha                                 |
| 29 | TNF $\beta$    | Tumour necrosis factor beta                                  |
| 30 | VEGF           | Vascular endothelial growth factor                           |

**Supplementary Table 4** List of the 39 phosphoproteins measured by the PathScan RTK Signaling Antibody Array, Chemiluminescent Readout (Cell Signaling Technology, Danvers, Massachusetts).

|                                  | Protein (phosphorylation site) | Name   |
|----------------------------------|--------------------------------|--|
| <i>Receptor tyrosine kinases</i> |                                |  |
| 1                                | EGFR/ErbB1                     | Epidermal growth factor receptor                     |
| 2                                | HER2/ErbB2                     | Human epidermal growth factor receptor 2             |
| 3                                | HER3/ErbB3                     | Human epidermal growth factor receptor 3             |
| 4                                | FGFR1                          | Fibroblast growth factor receptor 1                  |
| 5                                | FGFR3                          | Fibroblast growth factor receptor 3                  |
| 6                                | FGFR4                          | Fibroblast growth factor receptor 4                  |
| 7                                | InsR                           | Insulin receptor                                     |
| 8                                | IGF-IR                         | Insulin-like growth factor receptor 1                |
| 9                                | TrkA/NTRK1                     | Tyrosine kinase receptor A                           |
| 10                               | TrkB/NTRK2                     | Tyrosine kinase receptor B                           |
| 11                               | Met/HGFR                       | Hepatocyte growth factor receptor                    |
| 12                               | Ron/MST1R                      | Macrophage stimulating 1 receptor                    |
| 13                               | Ret                            | Ret proto-oncogene receptor tyrosine kinase          |
| 14                               | ALK                            | Anaplastic lymphoma kinase                           |
| 15                               | PDGFR                          | Platelet-derived growth factor receptor              |
| 16                               | c-Kit/SCFR                     | Stem cell growth factor receptor                     |
| 17                               | FLT3/Flk2                      | Foetal liver kinase 2                                |
| 18                               | M-CSFR/CSF-1R                  | Macrophage colony-stimulating factor 1 receptor      |
| 19                               | EphA1                          | Ephrin type-A receptor 1                             |
| 20                               | EphA2                          | Ephrin type-A receptor 2                             |
| 21                               | EphA3                          | Ephrin type-A receptor 3                             |
| 22                               | EphB1                          | Ephrin type-B receptor 1                             |
| 23                               | EphB3                          | Ephrin type-B receptor 3                             |
| 24                               | EphB4                          | Ephrin type-B receptor 4                             |
| 25                               | Tyro3/Dtk                      | Tyro3 tyrosine-protein kinase                        |
| 26                               | Axl                            | AXL receptor tyrosine kinase                         |
| 27                               | Tie2/TEK                       | Tunica interna endothelial cell kinase               |
| 28                               | VEGFR2/KDR                     | Vascular endothelial growth factor receptor 2        |
| <i>Signalling Nodes</i>          |                                |  |
| 29                               | Akt/PKB/Rac (Thr308)           | Proto-oncogene c-Akt / protein kinase B              |
| 30                               | Akt/PKB/Rac (Ser473)           | Proto-oncogene c-Akt / protein kinase B              |
| 31                               | p44/42 MAPK                    | Mitogen-activated protein kinase isoform p44         |
| 32                               | S6 Ribosomal Protein           | S6 Ribosomal Protein                                 |
| 33                               | c-Abl                          | Abelson murine leukaemia viral oncogene homolog<br>1 |
| 34                               | IRS-1                          | Insulin receptor substrate 1                         |
| 35                               | Zap-70                         | 70 kDa zeta-associated protein                       |
| 36                               | Src                            | Rous sarcoma   |
| 37                               | Lck                            | Lymphocyte cell-specific protein-tyrosine kinase     |
| 38                               | Stat1                          | Signal transducer and activator of transcription 1   |
| 39                               | Stat3                          | Signal transducer and activator of transcription 3   |

**Supplementary Figure 2** Relative median difference in cytokine concentrations between idiopathic and Crohn's disease groups, and between the Crohn's disease group and healthy controls. Error bars show 99% confidence intervals estimated using Hodges-Lehman method.

**Supplementary Figure 3** Relative median difference in phosphoprotein pixel intensities between idiopathic and Crohn's disease groups, and between the Crohn's disease group and healthy controls. Error bars show 99% confidence intervals estimated using Hodges-Lehman method.
