COMMENTS TO AUTHORS

Very interesting article, shows your professional research in so simple comprehensions, to the target without boring attitude we sometimes face in reviewing such manuscripts, However it could be so useful (Optional) if add a paragraph(s) about using of norfloxacin and other antibiotics as immunomodulating agents post Liver Transplantation especially in the field of Living Donor Liver Transplantation with special concern to small for size and those with opportunistic infections post transplantation. Some statements are written in different Font Style.

COMMENTS TO AUTHORS

This is a well-written review article on the use of quinolones for treating and preventing bacterial infections in patients with liver cirrhosis. The authors described in detail the possible underlying mechanisms for the effectiveness of quinolones, mainly in terms of immunological aspects. The Reviewer has the following comment: The authors should make figures showing the mechanisms of the susceptibility to bacterial infections in patients with liver cirrhosis and the possible underlying mechanisms for the effectiveness of quinolones.
