SPECIFIC COMMENTS TO AUTHORS
This is a well-written paper on PNET presented as a single-centre retrospective study analysing differences between small < 2cm and biber >2 cm PNET. The authors have made an excellent introduction and provided background on PNET issues. Methods are well-described and appropriate for this type of study. Results are well-presented in tables and graphs, and they are easy to read and understand. The discussion is well-balanced, discussing literature data and own results. Limitations are stated, showing that the authors critically revised their own work. Please add the reference for the following statement...In recent years, there has been a significant increase in the diagnosis of tumors smaller than 2 cm in countries like the United States. I recommend this manuscript for publication.
