Impact of non-oncological factors on tumor recurrence after liver transplantation in hepatocellular carcinoma patients

Abstract

Hepatocellular carcinoma (HCC) is the most common primary neoplasm of the liver, and is one of the leading causes of cancer-related death worldwide. Liver transplantation (LT) has become one of the best curative therapeutic options for patients with HCC, although tumor recurrence after LT is a major and unaddressed cause of mortality. Furthermore, the factors that are associated with recurrence are not fully understood, and most previous
