**SPECIFIC COMMENTS TO AUTHORS**

Major Comments: 1. Are there controversies in this field? What are the most recent and important achievements in the field? In my opinion, answers to these questions should be emphasized. Perhaps, in some cases, novelty of the recent achievements should be highlighted by indicating the year of publication in the text of the manuscript. 2. The results and discussion section is very weak and no emphasis is given on the discussion of the results like why certain effects are coming in to existence and what could be the possible reason behind them? 3. Conclusion: not properly written. 4. Results and conclusion: The section devoted to the explanation of the results suffers from the same problems revealed so far. Your storyline in the results section (and conclusion) is hard to follow. Moreover, the conclusions reached are really far from what one can infer from the empirical results.

### SPECIFIC COMMENTS TO AUTHORS

This manuscript is good regarding reporting a very rare case. The following points have to be taken into account:  
- Language needs to be edited by an English native speaker, several linguistic issues were observed.  
- Some parts of discussion need to return to the introduction.  
- Figures need to be more described by adding arrows at certain points.
