COMMENTS TO AUTHORS

This review describes the pathophysiology as well as the clinical applications of cryospray ablation in mainly the esophagus but also other areas of gastrointestinal endoscopy. Cryospray ablation may be used as a method for treatment of dysplastic Barrett's esophagus, but for esophageal carcinoma. Actually there are few of cryospray ablation application in endoscope. This paper can be an introduction for this therapy.

COMMENTS TO AUTHORS

The subject of manuscript is very interesting. Unlike other endoscopic methods, Cryospray ablation is unique, "old-new" technique to enable successful ablation of early esophageal carcinoma, palliative debulking of advanced carcinoma and reduction of tumor ingrowth into stents. The applications of cryospray ablation may include control of bleeding from gastric antral vascular ectasia, portal hypertensive gastropathy, and radiation proctitis. This modality continues to evolve as an important tool of therapeutic endoscopy. The manuscript is well written and reports logical and innovative conclusions
