SPECIFIC COMMENTS TO AUTHORS

The authors report a case of homonymous hemianopia secondary to nonketotic hyperglycemia. The scientific value of the manuscript lies in the fact that it is a very uncommon complication of a common clinical condition. The discussion conducts a comprehensive review of neurological complications of nonketotic hyperglycemia and the likely physiopathology of hemianopia in this condition. While the introduction, discussion and conclusion sections are written in a concise and informative manner, there could be more information on the patient's treatment on the case report section. It would be interesting to know if he was treated in an outpatient basis, or if he was admitted, for how long did he stay in the hospital. It would also be interesting for the authors to further comment on the patient's hyponatremia (considering it has also been described as a cause for hemianopia). Writing in the english language needs further revision and minor corrections.
