PEER-REVIEW REPORT

Name of journal: World Journal of Orthopedics

Manuscript NO: 87287

Title: Late brachial plexopathy after a mid-shaft clavicle fracture: A case report

Provenance and peer review: Unsolicited manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer’s code: 05458177

Position: Editorial Board

Academic degree: MD, PhD

Professional title: Assistant Professor, Surgeon

Reviewer’s Country/Territory: Indonesia

Author’s Country/Territory: Saudi Arabia

Manuscript submission date: 2023-08-01

Reviewer chosen by: AI Technique

Reviewer accepted review: 2023-08-08 02:57

Reviewer performed review: 2023-08-08 07:39

Review time: 4 Hours

SPECIFIC COMMENTS TO AUTHORS
The manuscript is well-written, but I suggest the authors to provide some images to describe the proximity of the fracture callus to the brachial plexus, either intraoperative or in imaging examination.

SPECIFIC COMMENTS TO AUTHORS
Thanks for the opportunity to review this case report. Introduction: Change "An extremely rare" to "A rare" Please describe and expand the incidence of brachial plexus injury with the fracture itself, the ORIF, the conservative management. Case Presentation: Line 29: multiple right sided rib fractures .. Please describe what was done for that. Line 32: Patient was discharged!!.. There is no mention how the patient was treated. Line 33: 2 weeks post-injury, a mid-shaft comminuted clavicle fracture was documented.. You mean it the fracture was not discovered except after 2 weeks? Line 37: patient declined.. what was the cause Line 44: Remove unfortunately Line 46: loss of sensation in the hand and forearm region. which areas exactly Line 90: Plain radiographs of the right clavicle showed progression of the fracture healing and maintained implant fixation. Please add those 6 months follow-up Xrays Did you do nerve conduction studies prior to the surgery? Why did you use 2 plates for ORIF
