COMMENTS TO AUTHORS

An interesting paper on the attitudes towards CRC screening that can help in designing future screening programs. Comments; 1. authors should include in the limitations that a colonoscopy screening group was not included

COMMENTS TO AUTHORS

The paper is about the long-term psychological harm of participation in colorectal cancer (CRC) screening in Norway. In general, the paper is well written and structured. It has several limitations, which are already addressed in the discussion section. The authors already published a paper on the short term outcome following screening for CRC with no psychological harm. Why should it have an effect on the long term? Please comment on that!
