Supplementary Figure 1 Forest plots including the weighted median, simple mode, weighted mode, and mendelian randomization-Egger regression methods showed the causal associations between liver cirrhosis and immune cell traits. CI: Confidence interval; OR: Odds ratio; TBNK: T cells, B cells, and natural killer cells; cDC: Conventional dendritic cells; CD: Cluster of differentiation; BAFF: B-cell-activating factor; HLA: Human leukocyte antigen; DR: Dweller region; AC: Absolute count; MDSC: Myeloid-derived suppressor cells; NKT: Natural killer T cells; NK: Natural killer; CCR2: C-C motif chemokine receptor 2; MR: Mendelian randomization.

leave-one-out plots: Forward

Supplementary Figure 2 Leave-one-out method shown that the data were robust in the forward sensitivity analyses. MR: Mendelian randomization.

Funnel plots: Forward

Supplementary Figure 3 Funnel plots shown that the data were robust in the forward sensitivity analyses.

Supplementary Figure 4 Forest plots including the weighted median, simple mode, weighted mode, and MR-Egger regression methods showed the causal associations between immune cell traits and liver cirrhosis. CI: Confidence interval; OR: Odds ratio; TBNK: T cells, B cells, and natural killer cells; cDC: Conventional dendritic cells; CD: Cluster of differentiation; AC: Absolute count; DR: Dweller region; FSC-A: Forward scatter-A; SSC-A: Side scatter-A; MDSC: Myeloid-derived suppressor cells; MR: Mendelian randomization.

leave-one-out plots: Reverse

Supplementary Figure 5 Leave-one-out method shown that the data were robust in the reverse sensitivity analysis.

Funnel plots: Reverse

Supplementary Figure 6 Funnel plots shown that the data were robust in the in the reverse sensitivity analysis.
