Renin angiotensin system in liver diseases: Friend or foe?

Ana Cristina Simões e Silva, Aline S Miranda, Natália P Rocha, Antônio L Teixeira

Abstract

In the last three decades, the understanding of the Renin Angiotensin System (RAS) has been changed by the discoveries of functional local systems, novel biologically active peptides, additional specific receptors, alternative pathways of Angiotensin (Ang) II generation, and new roles for enzymes and precursor components other than those in Ang II synthesis. In this regard, the discovery that Ang-(1-7) opposes the pressor, proliferative, pro-fibrotic, and pro-inflammatory effects mediated by
