COMMENTS TO AUTHORS

An interesting case of postoperative PVT in a 54-year-old woman who underwent IRE for locally advanced pancreatic cancer. However, the manuscript have to be edited by a native English speaker.

COMMENTS TO AUTHORS

This is an interesting case report. In this case, the authors reported a case of postoperative PVT in a 54-year-old woman who underwent IRE for locally advanced pancreatic cancer. MRI of the abdomen also revealed a tumor mass located at the pancreatic body; hence, pancreatic cancer was suspected. Artery invasions were seen near the celiac axis. The case is well described and discussed. After an editing of English, it can be published.
