Hepatopulmonary syndrome: What we know and what we would like to know

Grilo-Bensusan I *et al.* Hepatopulmonary syndrome

Israel Grilo-Bensusan, Juan Manuel Pascasio-Acevedo

Abstract

Hepatopulmonary syndrome (HPS) is characterized by abnormalities in blood oxygenation caused by the presence of intrapulmonary vascular dilations (IPVD) in the context of liver disease, generally at a cirrhotic stage. Knowledge about the subject is still only partial. The majority of the information about the etiopathogenesis of HPS has been obtained through experiments on animals.
