SPECIFIC COMMENTS TO AUTHORS

It is a well written case report of rhinocerebral mucormycosis (RM) caused by *Rhizopus Oryzae* in a patient with a fourth relapse of acute myeloid leukemia. Please include in the discussion an extensive literature review of other RM cases by *Rhizopus Oryzae*, comment on any novel finding/conclusion drawn from current case and explain why an extensive work-up, including brain CT, was not done from first nose isolation of *Rhizopus Oryzae* in a patient with so aggressive immunodeficient condition.
