SPECIFIC COMMENTS TO AUTHORS

congratulations on your publication. I have found it interesting and with beautiful and complete iconography, both from the imaging tests and the endoscopic vision as well as the pathological one. Papillary necrosis is a pathology that we rarely have in our mind when doing an RIRS. Knowing it, it is possible that we detect it more often.

SPECIFIC COMMENTS TO AUTHORS
Well written good focused on Renal papillary necrosis with urinary tract obstruction. Findings of Flexible URSS are similar to pyelonephritis findings (fig 4 and fig 5) Authors could mention more and clarify these findings in discussion section.
