Reviewer #1:

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Minor revision

Specific Comments to Authors: Authors reviewed about the risk of HMS in TMS for mood disorders. As the results, TMS was safe and effective method, and no definite risk of HBS was shown. The results was understandable and informative. But several minor issues should be remained. Authors should show the data about anti-depressants in trials.

Reply: as requested, we added the data about antidepressants in the results section:

"We found four studies allowing the use of antidepressants: fluoxetine[49], paroxetine[46], amitriptyline[48] and not specified molecules (tricyclic antidepressants, selective serotonin reuptake inhibitors, serotonin-norepinephrine reuptake inhibitors)[45]".

" None of the studies that used antidepressants in addition to TMS treatment reported the onset of HMS[45,46,48,49]."

Several miss-spellings and typing errors were found.
