Basic Study

Reliability and validity of an instrument to measure the attitudes of psychiatric patients towards involuntary admission: Attitudes Towards Involuntary Admission

Adel Gabriel

Abstract

AIM: To construct and assess the psychometric properties of an instrument to measure patients' attitudes towards involuntary hospitalization.

METHOD: This is a two phase study. In the first phase, based on comprehensive literature review, a twenty one item scale to measure patients' attitudes to involuntary admission was constructed. Forensic and inpatient Psychiatrists, patients' advocates and legal experts (n= 15) were invited to participate in the validation process of the
