

Biostatistics statement

Title: Pancreatic volume change using 3D-CT volumetry and relationship with diabetes during long-term follow-up in patients with autoimmune pancreatitis

Manuscript NO: 99528

We do not have a biomedical statistician in Oita University. Our manuscript used statistical methods commonly analyzed in clinical research, such as the Mann-Whitney U test, Students t-test, Fisher's exact test, analysis of covariance, Kaplan-Meier analysis, log-rank test, and Spearman's rank correlation. Therefore, I, as co-author, performed the statistical analysis using SPSS version 26.0 (IBM, Armonk, NY, USA).
