SPECIFIC COMMENTS TO AUTHORS

This study aimed to identify the clinical factors associated with progression-free survival (PFS) after complete CRS/HIPEC in patients with colorectal/high-grade appendiceal, ovarian, and gastric cancers. The author thinks that Achieving CC-0 was associated with a lower early recurrence rate and improved long-term survival. The results are true and authentic. The author scientifically and reasonably cite the latest references which are important in this field and related to the scientific problems and research hypotheses addressed in the study. The language in article correctly, clearly and concisely express the information.
