Urotrauma Guideline - American Urological Association https://www.auanet.org/guidelines/urotrauma
Purpose: Urologic injuries often occur in the context of severe multisystem trauma that requires close cooperation with trauma surgeons. The urologist remains an important consultant to the trauma team, helping to ensure that the radiographic evaluation of urologic structures is performed efficiently and accurately and that the function of the genitourinary system is preserved whenever possible.

Imaging of Genitourinary Trauma: American Journal of ... https://www.ajronline.org/doi/full/10.2214/AJR.09.2479
Imaging plays a crucial role in the diagnosis and treatment of the genitourinary tract in patients who have suffered either blunt or penetrating trauma because urothelial injuries are common in such patients. Contrast-enhanced CT is the primary imaging technique used to evaluate the upper and lower urinary tract for trauma.
