SPECIFIC COMMENTS TO AUTHORS
A manuscript is within the scope of the Journal. Title reflects the content of the article. Abstract is adequately structured. Did the patient perform an MRI scan? I’d like to look at a picture of the pathology. Are there any more new findings in your case?

SPECIFIC COMMENTS TO AUTHORS

Atypical spindle cell lipomatous tumor is a rare soft tissue neoplasm with a low potential for malignancy. Detailed case materials are provided in this paper. Are there any more new findings of molecular pathology in your case? The findings of molecular pathology will be highlights of the article. It is suggested that the authors provide the molecular pathological changes of Atypical spindle cell lipomatous tumor again. Submit again after revision.

SPECIFIC COMMENTS TO AUTHORS
The authors reported a rare case of retroperitoneal atypical spindle cell lipomatous tumor. The case presentation was complete and clear, and the discussion was adequate and sufficient. I have some concerns needed to be clarified. 1. As a case report, the race of the patient should be list. 2. The operation took 8h. What were the difficulties? How about the intraoperative bleeding? 3. Could the follow-up CT scans be provided? They should be compared with the preoperative ones.
