Manuscript NO: 93099

Title: Effect of percutaneous electrical stimulation at the Baliao point on preventing postpartum urinary retention after labor analgesia

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer’s code: 07915301

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer’s Country/Territory: United States

Author’s Country/Territory: China

Manuscript submission date: 2024-02-20

Reviewer chosen by: AI Technique

Reviewer accepted review: 2024-02-25 03:06

Reviewer performed review: 2024-03-09 12:17

Review time: 13 Days and 9 Hours

Labor analgesia technology is mainly the use of epidural anesthesia for analgesia. However, anesthetics block the sacral plexus. In this study, transcutaneous electrical stimulation of Baliao points combined with biofeedback therapy was used to intervene in parturients with labor analgesia. In this study, the authors explored the application effect of transcutaneous electrical stimulation at Baliao point combined with biofeedback in preventing postpartum urinary retention in parturients undergoing labor analgesia. The study is well performed, and the results are interesting. However, some minor revisions are required before acceptance: 1. The manuscript requires a minor editing. Some spelling mistakes should be corrected. 2. The title is too long, please short it. 3. Please move the limit of the study to the end of the discussion from the conclusion. 4. Figure 1 should be improved.
