SPECIFIC COMMENTS TO AUTHORS

It is well known to treat milking with myocardial bridging with beta-blockers and other sympatholytics agents (and avoid nitroglycerin), which was described in this case. There is no new information provided in this paper.
PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 77729

Title: Myocardial bridging phenomenon is not invariable: A case report

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer’s code: 06310981

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer’s Country/Territory: Tunisia

Author’s Country/Territory: China

Manuscript submission date: 2022-05-27

Reviewer chosen by: AI Technique

Reviewer accepted review: 2022-05-27 19:33

Reviewer performed review: 2022-06-13 09:43

Review time: 16 Days and 14 Hours

SPECIFIC COMMENTS TO AUTHORS

Very interesting study with sound methodology. I think that this manuscript had added some knowledge and value to the literature. The drafting of the article is excellent. It follows the guidelines of “The CARE Guidelines: Consensus-based Clinical Case Reporting Guideline Development; (Joel J. Gagnier et al, 2013)”. The main points that emerge from this manuscript are: NOTE 1. Some of the patient's blood tests are missing, such as: a. blood glucose; b. urea-create; c. total cholesterol; d. HDL-cholesterol; e. LDL-cholesterol; f. triglycerides. NOTE 2. The patient's BMI and weight. NOTE 3. Full hormonal assessment between the two dates: January and October 2020 NOTE 4. You did not specify whether the patient remained under medical supervision at home, whether he received a special diet, whether he started a rehabilitation program from January 2020 to October 2020.... NOTE 5. You state that the vegetative nervous system was the main regulator of the patient's cardiac function without having performed a non-invasive sympathovagal balance exploration (by Heart rate Variability technique).

NOTE 6. Some regulatory parameters of vascular function may be induced by the endocrine function of the vessels themselves. You have not given any physiological elements that condition the regulation of coronary vessels. NOTE 7. In conclusion, the manuscript is worth publishing if the authors give more physiological explanations as to why the myocardial bypass phenomenon has dramatically decreased from 90% to 30% during cardiac systole.
