COMMENTS TO AUTHORS

This is a good review to illustrate the epidemiology of drug resistant (DR) extrapulmonary TB (EPTB). Only some suggestion. 1. Highlight of this article is table 1. If possible, can the authors shorten the manuscript? 2. The probability of DR-TB is higher in PTB than EPTB. Therefore, when the physicians face the PTB, they will aware of DR-TB. In contrast, they may neglect when they face EPTB. Thus, I suggest the authors to review the prevalence of DR-EPTB in articles that give the data about DR-TB in patients who had only EPTB (no PTB). 3. If possible, please provide the outcome of treatment in DR-EPTB by summarize in Table 1 to make the readers realize in difficulty and poor outcome.
