SPECIFIC COMMENTS TO AUTHORS
This paper that is based on statistical analysis is well written and gets to the point of the issue. As there are no real experimental methodologies to critique and the statistical analysis is sound, and the conclusions reasonable, it is acceptable for publication.
PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 79060

Title: Dynamic Changes of Estimated Glomerular Filtration Rate are Conversely Related to Triglyceride in Non-overweight Patients

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer’s code: 05562744

Position: Editorial Board

Academic degree: FACS, MD, PhD

Professional title: Professor, Senior Scientist

Reviewer’s Country/Territory: Turkey

Author’s Country/Territory: China

Manuscript submission date: 2022-08-01

SPECIFIC COMMENTS TO AUTHORS
The title and abstract are well written. Introduction covers the general information regarding the subject. Materials and methods section is well written. Results section is well written. Discussion is sufficient. References are up to date. The study includes a total of 355 HBV-infected patients who received TDF treatment. The eGFR is dependent on base line eGFR and basal BMI of the patients. I believe the study is didactic and subject has not been studied before.

SPECIFIC COMMENTS TO AUTHORS

it is a well-documented manuscript that will add more awareness in the literature toward the relationship between TG and GFR. However, there are two important comments that I want to add. Firstly, I suggest to change the title and make it more easier to understand, such as change the word 'associated' to (conversely related) as this explain the title better. In addition, the BMI range more than 25 is better to use the word overweight instead of obese as it is more accurate.
