**COMMENTS TO AUTHORS**

In this review, the authors aimed to assess the role of asymmetric dimethylarginine as a new and meaningful biomarker of cardiovascular complications in patients with diabetes mellitus. It seems to me a good review, correctly developed with a suitable order, and it summarizes the relevant approaches and creates an awareness on the subject. However, there are some points that should be taken in consideration to improve the quality of the study. Comments; ? There are several spelling and punctuation errors in the whole text (...end-products. and... etc). ? The English editing should be revised. ? Use of abbreviations should be rechecked and revised. ? Sentence starting with "...A specific pharmacological treatment to impact ADMA is not available yet..." should be presented in a separate paragraph or title. ? Sentence starting with "...In our study with 87 type 2 DM (T2DM) patients (Table 1), we have examined whether ADMA and other CV risk factors are the useful predictors for DMCV complications..." should be presented in a separate paragraph or title. In conclusion, the manuscript may become acceptable after these revisions and need to be reviewed again. Sincerely,

### COMMENTS TO AUTHORS

Good topic and good review of the literature. This manuscript needs to be edited by a native English speaker. Furthermore, the section including the authors' personal experience should be separate from the review, in a new section under a different heading (e.g. Our experience with ADMA)
