We report the case of a patient who presented with abdominal pain and M.E.H and discuss the association between adenomyoma and heterotopic pancreas. 2. Case Presentation A...

Pancreatic and gastric heterotopic tissue presenting as a ...  
Sep 01, 2018  Pancreatic and gastric heterotopic is an uncommon congenital anomaly in which gastric and/or pancreatic tissue is found outside of its anatomic location. In the majority of patients, lesions are found incidentally because they tend to be asymptomatic. However, lesions may become symptomatic when inflammation, obstruction, and bleeding occurs.

May 09, 2015  Heterotopic pancreas (HP) is defined as pancreatic tissue without real anatomical or vascular connection to the pancreas and was first reported by Jean-Schultz in 1729 [1, 2]. The incidence of HP is 0.5 to 13.0% in autopsy studies [3]. The most common sites of HP are the stomach, duodenum, and jejunum, but it can be also found in the ileum, Meckel's diverticulum (MD), colon, gall...

Dec 01, 2007 - Review of the literature reveals adenocarcinoma arising within heterotopic pancreas to have a better prognosis than patients with adenocarcinoma of the pancreas. This may be due to the earlier presentation of carcinoma in HP. Diagnosis of heterotopic pancreas before surgery is rare. Cited by: 17 Author: Dobroth Rinald, Sonja R. Thepo, Neeraj M...

Feb 01, 2004 - The heterotopic pancreas is asymptomatic in general and is usually found incidentally, however, mass-like manifestations causing pyloric obstruction, ulcer, and bleeding can be observed in the gastric area. Although a heterotopic pancreas may demonstrate most of the pathologic changes seen in the eutopic pancreas, such as acute and chronic pancreatitis, a pseudocyst, an abscess, and an exocrine or endocrine neoplasm, an adenocarcinoma arising in a gastric heterotopic pancreas...
