COMMENTS TO AUTHORS

This paper shows a new miniinvasive procedure for cholecystectomy. It is not very clear and evident the usefulness and the need of this new procedure. It is also not proper and reasonable to consider this proposal as LECS which is instead very different.

COMMENTS TO AUTHORS

Thank you for submitting your paper. The authors presented the procedure of endoscopic cholecystectomy using a flexible endoscopy via single port. This issue is interesting and worthwhile for readers. However, the aim of this experiment was unclear. What do you want to clarify? Is it beneficial for the patient to use a flexible endoscopy or to achieve whole procedure via single port? Is it true that this method is safe or beneficial compared with conventional cholecystectomy? Could you comment about them?
