Debunking the myths perpetuating low implementation of IPT amongst HIV-infected persons

Akolo Christopher, Bada Florence, Okpokoro Evaezi, Nwanne Ogochukwu, Iziduh Sharon, Usoroh Eno, Ali Taofeekat, Ibeziako Vivian, Olanrewaju Oladimeji, Odo Michael

### Abstract

13 Isoniazid Preventive Therapy (IPT) is the administration of isoniazid (INH) to people with latent tuberculosis (TB) infection (LTBI) to prevent progression to active TB disease.

Despite being life-saving for HIV-infected persons who do not have active TB, IPT is poorly implemented globally due to misconceptions shared by healthcare providers and
