COMMENTS TO AUTHORS

The authors should comment that delayed diagnosis and surgery of intestinal obstruction can lead to necrosis of the involved bowel. English of the manuscript need to be revised extensively.

COMMENTS TO AUTHORS

The authors demonstrate the rare complication of Meckel's diverticulum which is described in only a several cases. The case report includes the description of symptoms and applied diagnostic and therapeutic procedures. The title of this paper appropriately reflects the purpose of the study. Running title is missing. On the title page the corresponding author is not declare. Abstract: has to be rewriting because the identical sentences are found in the other sections of the manuscript. It has to be more concise including the main symptoms, diagnostic procedures and recommendation in diagnose and therapy of this rare case. Results: the figures have to be incorporated in the results and within bracket. Discussion: placing the author's results in the context of previously published studies. The more complete comparison of the author's data to literature reports would help the reader to recognize this rare case by symptoms and to use proper diagnostic procedures in similar cases.
