COMMENTS TO AUTHORS

This article is a comprehensive review regarding recent advances in endoscopic management of biliary complications after living donor liver transplantation. This review article is well-written and refers to many recent manuscripts. Therefore, this article is very informative for readers of this journal.

COMMENTS TO AUTHORS

I appreciate of your huge work on this manuscript and comprehensive consideration of every aspect of LDLT, especially for your consideration of pediatric liver translation and complications for liver donor. Adjusting the site of types of biliary anastomotic strictures might be better.

COMMENTS TO AUTHORS

This review article provides a wide scope of knowledge on endoscopic managements of biliary complications following liver transplantation. It is highly applaudable for the authors to make this manuscript for international readers who are involved in liver transplantation. However, some minor revisions are needed to improve the quality of the manuscript. The subsection "Types of biliary anastomotic strictures" is recommended to be included in the introduction of several complications at the very beginning of this manuscript. In addition, incidentally, I could find the improper use of indefinite article in the sentence "In these, if anastomotic stricture recurred, enteroscopic intervention was repeated and an biliary stent was placed in all of these patients" The indefinite article, "an", placed before "biliary" is inappropriate, because the letter "b" is not a vowel.

COMMENTS TO AUTHORS

In this article the author covered endoscopic management for different kinds of biliary complications. It is detailed and comprehensive. It could be made more focused if the author concentrates on biliary anastomotic stricture. Overall its well written, and I only have a few minor comments and questions. The author mentioned several risk factors for biliary complications. It is worthwhile to mention about prolonged cold ischaemic time and acute cellular rejections as important risk factors for biliary anastomotic stricture. Supplement with graphical illustration would be great for description of the magnet compression technique. Are there any long term results in the literature for using magnet compression to treat duct-to-duct or HJ strictures?
