### A case report of systemic capillary leak syndrome ...

<https://pubmed.ncbi.nlm.nih.gov/20148770>

Systemic capillary leak syndrome (SCLS) is a very rare disorder also known as Clarkson's disease. The condition is characterized by recurrent episodes of severe capillary hyperpermeability resulting in severe hemoconcentration, hypoalbuminemia, hypovolemia and shock. We describe a 41-year-old previo ...

### Continuous renal replacement therapy rescued life ...

<https://pubmed.ncbi.nlm.nih.gov/34039399>

Background: Capillary leak syndrome (CLS) is a rare disease characterized by profound vascular leakage and presents as a classic triad of hypotension, hypoalbuminemia and hemoconcentration. Severe CLS is mostly induced by sepsis and generally life-threatening in newborns, especially in premature infants. Continuous renal replacement therapy (CRRT) plays an important role of supportive ...

Capillary leak syndrome (CLS) is a very rare (<1%) but important and severe adverse effect of gemcitabine therapy. There are some emerging case reports of capillary leak syndrome secondary to treatments from taxanes such as docetaxel and paclitaxel. As demonstrated by this case, capillary

Dec 17, 2015 · Veno-venous ECMO for severe acute respiratory failure. Acute respiratory failure due to potentially reversible processes such as ARDS or utilization as a bridge-to-transplant have become the most common indications for ECMO therapy in adults . It is well recognized that positive pressure ventilation can have deleterious effects leading to ventilator-induced lung injury, oxidative stress, and ...

Apr 03, 2012 · Despite improved managements for acute respiratory distress syndrome (ARDS), its mortality remains high. Extracorporeal membrane oxygenation (ECMO) has emerged as the final option for the treatment of ARDS unresponsive to conventional measures. This study describes our experiences of venovenous ECMO support for the treatment of ARDS.
