Open Access

Open Access is a publication model where neither readers nor a reader's institution are charged for access to articles or other resources. Users are free to read, download, copy, distribute, print, search, or link to the full texts of papers published under a CC-BY-NC copyright license and use these articles for any non-commercial purpose.

Papers published under a CC-BY license may be distributed, reproduced or adapted for commercial advantage without the prior written consent of DMP.

Published research is the foundation for progress in medicine and science. Open Access publishing therefore leads to wider dissemination of information and increased efficiency in science, by providing:

- **Open Access to the widest audience**
As a researcher, publishing in an open access journal allows anyone with an interest in your work to read it - and that translates into increased usage and impact.
- **Open Access to ideas**
Whether you are a patient seeking health information, an educator wishing to enliven a lesson plan, or a researcher looking to formulate a hypothesis, making papers freely available online provides you with the most current peer-reviewed scientific information and discoveries.

Dove Medical Press (DMP) publishes many of its articles under a Creative Commons Attribution Non-Commercial license ([CC-BY-NC](#)). This allows for the non-commercial reuse of the published paper so long as the published paper is fully attributed. Commercial re-use (see sections 4 and 5 [here](#)) can only be undertaken with the permission of the publisher.

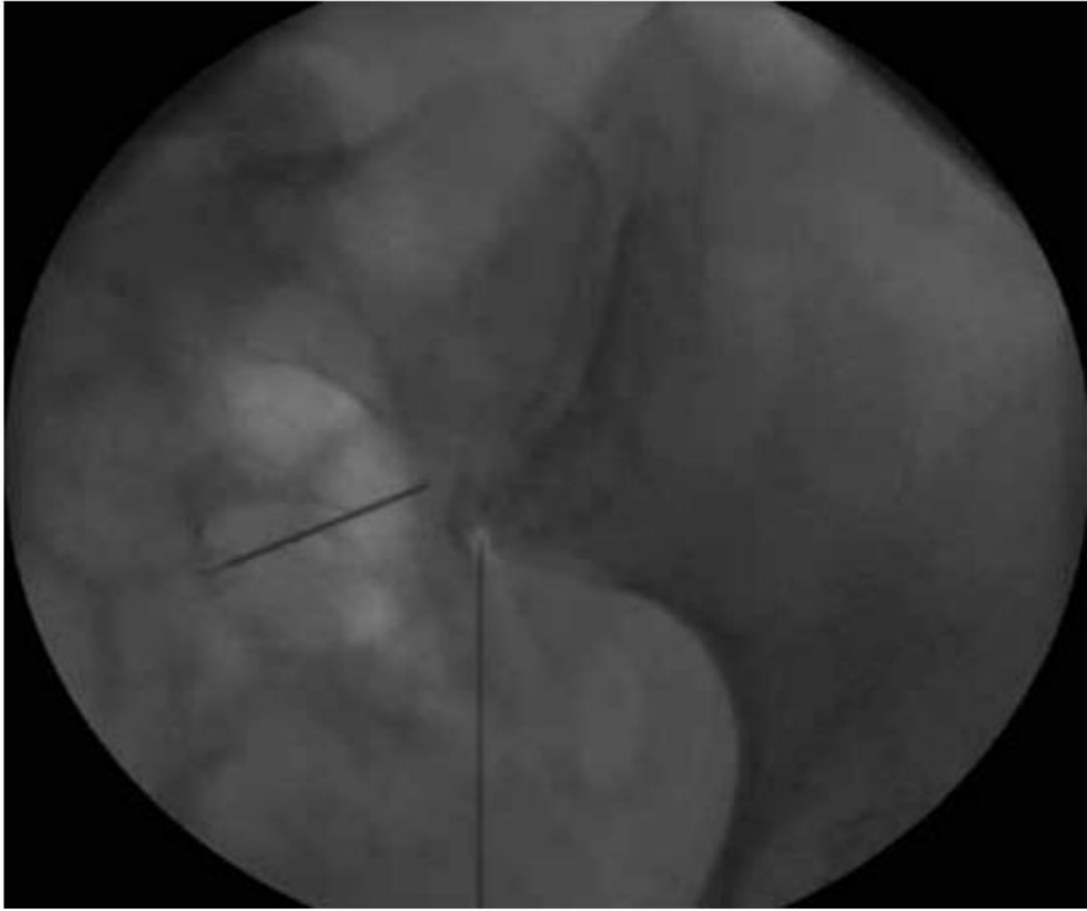

DMP offers authors whose articles are funded by the organisations [listed here](#) (under the CC-BY heading) the Creative Commons Attribution ([CC-BY](#)) license. This license permits the reuse for commercial purposes (see sections 4 and 5 [here](#)), but still requires that the article is fully attributed.

Authors who publish with DMP retain the copyright and moral rights in their work. DMP are entitled to manage permissions for commercial use of the author's published paper.

About Journal

Pain Physician Journal is the official publication of the American Society of Interventional Pain Physicians (ASIPP). The open access journal is published 6 times a year.

Pain Physician Journal is a peer-reviewed, multi-disciplinary, open access journal written by and directed to an audience of interventional pain physicians, clinicians and basic scientists with an interest in interventional pain management and pain medicine.

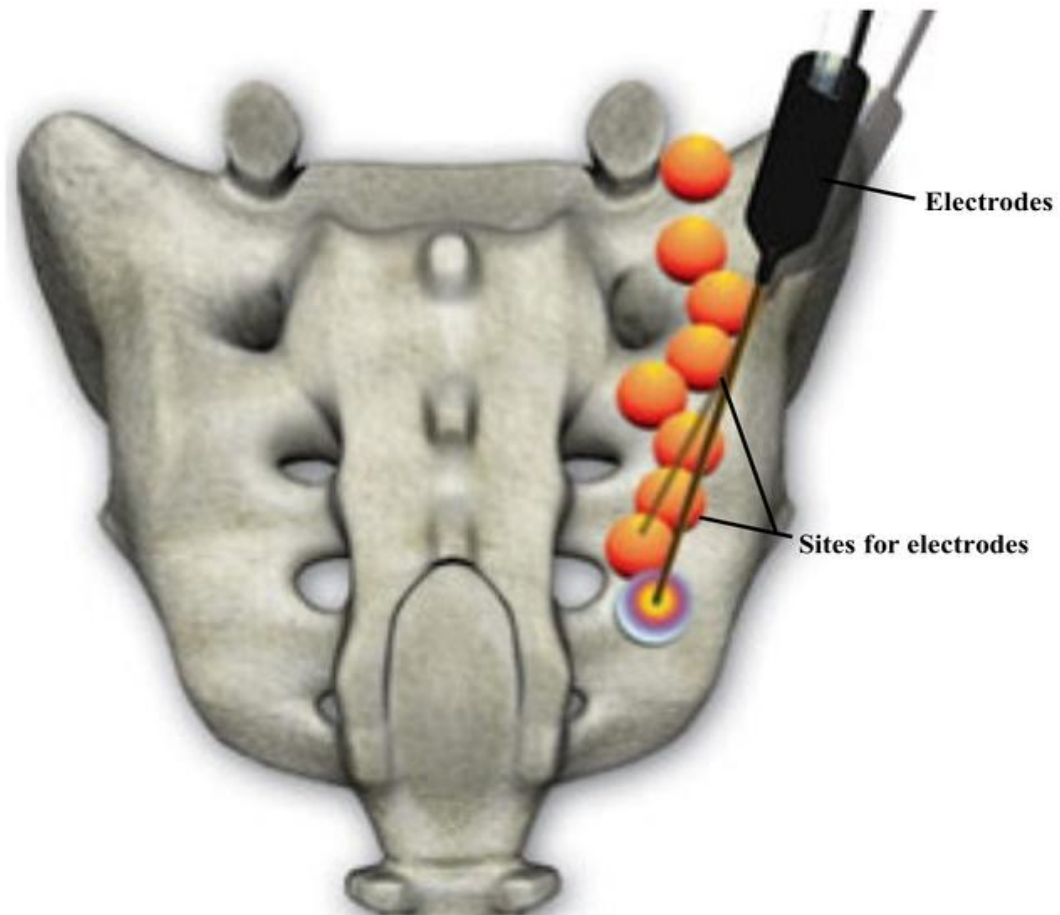

Pain Physician Journal presents the latest studies, research, and information vital to those in the emerging specialty of interventional pain management – and critical to the people they serve.

Open Access Statement: Pain Physician journal is committed to real and immediate open access for academic work. We operate under a Creative Commons license (CC-BY-NC). All of Pain Physician manuscripts are free to access immediately from the date of publication. There is no charge for any reader to download manuscripts for their own scholarly use. Readers can read, download, copy, distribute, print, search, or link to the full texts of the articles and reviews, or use them for any other lawful non-commercial purpose. Do not share the article/review if you have made changes to its content. Prior permission from the publisher or the author is not required but you must credit the author and link to the original site of publication.
