Paraneoplastic Focal Segmental Glomerulosclerosis (FSGS) is also rare among paraneoplastic nephritic syndromes (PNS). Case presentation: In this case report, we described a 64-year-old patient with cutaneous metastasis GIST accompanied by nephrotic syndrome as PNS, in whom symptomatic treatment was ineffective, but clinical remission was achieved after surgery.

Jan 11, 2021 - Focal segmental glomerulosclerosis (FSGS) is also a rare paraneoplastic renal syndromes (PRN). Case presentation. In this case report, we described a 59-year-old patient with paraneoplastic neurologic diseases (PND) accompanied by paraneoplastic syndrome as PAP-renal with sympotomatic treatment was ineffective. Inc diabetic nephropathy was achieved after surgery.

Paraneoplastic Glomerulopathy - ScienceDirect

Jan 31, 2014 - Paraneoplastic focal segmental glomerulosclerosis. A 43-year-old man presented with nephrotic syndrome and subsequently diagnosed with triplea. The figure shows a tumor developing glomerulus showing segmental collapse and sclerosis containing a trapped space near the basement membrane with admixture to the Bowman capsule.

Paraneoplastic syndromes in lung cancer and their ...

Jan 10, 2013 - Paraneoplastic syndromes are a rare but serious complication associated with lung cancer. In the discussion, we will explore the types, causes, and treatment options. The occurrence of paraneoplastic syndromes is relatively low, but they play a significant role in the diagnosis and management of lung cancer.
