COMMENTS TO AUTHORS

This manuscript entitled “Advances in the surgery procedures for convergence insufficiency-type intermittent exotropia” was to review the current viewpoints in the surgical interventions to treat convergence insufficiency type intermittent exotropia include lateral rectus recession(s) with or without a slanting procedure, unilateral lateral rectus recession with medial rectus resection, and medial rectus resection(s) with or without a slanting procedure. This is an interesting topic and well written, only three comments need to make it more clearly and clarified. Minor comments: 1)

P2, 1, line10. “...three groups based on patients’ response to monocular occlusion”, it is not clearly what three groups. 2) P2, 1, line 11. “...and bilateral lateral rectus recessions was performed based on near measurements with 1 mm augmentation.” It is not clearly, please make it more clearly. 3) P3, 2, 2nd paragraph, line 3. What is the meaning of medial rectus strengthenings here?
