Distal radius volar rim plate: Technical and radiographic considerations

Michelle Spiteri, Darren Roberts, Wayne Ng, Jamie Matthews, Dominic Power

Abstract

Aim

Fixation of far distal intra-articular distal radial fractures (AO-23C3 and AO-23B3) is challenging as standard volar plates are designed for placement proximal to the watershed line. To assess the technical considerations and radiographic outcomes when using the Synthes variable angle rim plate, which is designed for placement distal to the line to treat these unstable
