

To whom it may concern,

We, the authors of the manuscript entitled "

Exosomal miR-191 promotes colorectal cancer progression by inducing M2 macrophage polarization and inhibiting ferroptosis

", confirm that all statistical analyses presented in the study were conducted by the authors themselves.

The statistical methods used are standard and widely accepted in the field, and were applied appropriately based on the study design and data characteristics. Although the manuscript has not undergone a separate biostatistics review by an independent statistician, the authors have sufficient expertise in statistical analysis and have ensured the validity and accuracy of the methods used.

Should further statistical review be required, we are willing to cooperate and provide any additional clarification.

Sincerely,
Qing-yun Zhao
