Title: Effects of ALPPS on Inflammatory and Immune State of Hepatitis B Virus-Associated Giant HCC patients

Research Contents: Associating liver partition and portal vein ligation for staged hepatectomy (ALPPS) provides a chance for radical resection for massive liver cancer patients who cannot undergo primary resection. The clinical data of 12 patients underwent the ALPPS in the First Affiliated Hospital of Guangxi Medical University from January 2017 to January 2018 were retrospectively analyzed. The trends of blood routine, high-sensitivity C-reactive protein, interleukin-6, and T lymphocyte phenotype were monitored on the first, second, third, fifth, seventh, and tenth days before and after ALPPS, and further explore the effects of ALPPS on the inflammatory state and immune function of the body.

Applicant: Zhang Wen

Application Department: Department of hepatobiliary Surgery and liver transplantation, the First Affiliated Hospital of Guangxi Medical University

Acknowledgement: This study was supported by grants from the National Natural Science Foundation of China (81560387).

Date of Application: October 26, 2018

Date of Approval: October 29, 2018

Conclusion: This project fully considered and protected the rights and interests of the study objects. It meets the criteria of Ethical Review Committee. The Medical Ethics Committee of First Affiliated Hospital of Guangxi Medical University has approved the protocol.
