SPECIFIC COMMENTS TO AUTHORS

Liver disease incidence and hence demand on hepatology services is increasing. This study proposed a methodology for a national liver registry populated by routinely coded hospital and death certificate liver disease diagnoses, and have found that the incidence of liver disease has increased 3.6-fold between 1999 and 2019. The study was to develop novel insights into the changing aetiology and progression of liver disease, hence providing an analytic pipeline that will allow assessment of public health interventions, define clinical service requirements and aid redesign. good work!

SPECIFIC COMMENTS TO AUTHORS

This study aims to describe the incidence and natural history of liver diseases in Wales, which can inform the provision of hepatology services. The focus is on presenting all etiologies and stages of chronic liver disease. In addition, the authors intend to present a novel methodology for developing a national registry. The epidemiological aspects of the manuscript need improvement. The authors present the number of cases over the years, but the population (estimates) are not provided. Incidence rates are needed (number of new cases / estimated population) – not just the number of new cases per year. This is a shortcoming of the manuscript. It will be hard to review this paper critically until this adjustment is made. However, the graph with the percent distribution of the different diagnoses of liver disease is well done. In addition, a clear explanation of the novel system is missing. For example, how is it novel/different from what is currently being done in Wales and in other parts of the UK/world? Specific suggestions: Please use hyphens consistently (ICD-10) and make word plural in Abbreviations (Diseases); capitalize Office of National Statistics; alcohol-related, liver-related (with a hyphen) The authors refer to 20 years of data, but 1999-2019 is equivalent to 21 years. Figure 1 needs to be revised so that the different diagnoses are on the same level. Currently, they are vertical, which is misleading. Cut back on the number of tables and figures. Please shorten the manuscript – it is too long.
