SPECIFIC COMMENTS TO AUTHORS
1- The manuscript must be carefully proof-read for grammar and spelling issues. 2- The quality of Table 1 is very low. It is recommended that authors improve it in design and writing.

SPECIFIC COMMENTS TO AUTHORS

Dear Authors, Thank you for your submitting the manuscript entitled, "CD8-positive Indolent T-Cell Lymphoproliferative Disorder of the Gastrointestinal Tract: Case Report and Literature Review". The topic of this case report is interesting, and the discussion section is well written and very nice. However, several criticisms should be addressed as below.  

Major 1) line 140-163; For the 15 papers and 29 cases in Table 1, the characteristics of each item (for example, gender, age, gastrointestinal tract site, clinical symptoms, etc.) are shown as the number of cases and their proportion. Please add a new Table 2. In addition, perform a significant difference test between each group to calculate and describe the significant differences (P-values). Regarding its significance and limitations, while discussing on the selection bias of the selected cases, pay attention to the validity of the statistical analysis, and add a new consideration to the result and discussion sections.  

2) Minor 1) line 64; The position of the sentence of "The patient's informed consent was obtained to report this case." is incorrect, I think. Please correct it to the appropriate position.  

2) line 119; Please add a new figure that presents the TCRβ / γ clonal gene arrangement in situ hybridization. This is important.  

3) line 123; It says that the follow-up has been completed for financial reasons, but can you follow this patient in the future? Please briefly describe your positive attitude.
