COMMENTS TO AUTHORS

Congratulations for your article. The manuscript is well written, has important clinical message, and should be of great interest to the readers. I am interesting about this theme, because when OBI was not diagnosed can cause a real clinical problem. Therefore, review articles like this are always very helpful and interesting. The OBI is a clinical problem that need more studies, especially longitudinal studies about the mechanism and its clinical outcome.

COMMENTS TO AUTHORS

In this article, the authors reviewed the presence of occult hepatitis B infection among many high risk group including , blood donors , liver transplant recipients, patients coinfectd with HCV, HIV, patients undergoing immunosuppressive factors, hemodialysis, cirrhosis of liver , cryptogenic liver cirrhosis, abnormal alanine transaminase, lymphoma, rheumatoid arthritis and healthcare workers. The authors suggested the screening of HBV DNA by real-time PCR should be implemented in certain specific groups. It is interesting and provide important information. However, English usage and grammar should be corrected before publication.

COMMENTS TO AUTHORS

This is an illegible manuscript because of many typographical errors. The authors should recheck the mistakes. Specific comments 1. Recently, many review articles associated with OBI have been published. The reviewer hopes that the authors specifically describe the novel point in the present review article in "Introduction" or "Conclusion". 2. The screening of OBI is important for the patients with immunosuppressive treatments including the administration of biological drugs such as rituximab and infliximab. The authors should add the association between OBI and immunosuppressive treatment. 3. The text, tables and figures are unreadable. There were many typographical errors including a period, comma, space, font and size of words, and the use of unnecessary capital words. The authors must recheck them in detail. 4. There are many grammatical errors in the text. The text should be checked by a native speaker.
